

Installing UCL Unicode Phonetic Keyboard on Windows 10

1. Download executable installation from <http://www.phon.ucl.ac.uk/resource/phonetics/phonetickbd110.exe>
2. Run the program as administrator to install the keyboard. You will get a message about a missing instructions file. Ignore this.
3. Once the keyboard has been installed, run Windows settings by clicking on the Windows icon and typing "Settings".
4. Select "Time and Language"
5. Select "Region and Language". You will need to enter Administrator password
6. Select "English (United Kingdom)".
7. Select "Options" – you should see "Unicode Phonetic Keyboard" listed.
8. Click back-arrow to get back to Region and Language
9. Select "Advanced keyboard settings"
10. Check that "Use the desktop language bar" is enabled.
11. Click "Language bar options"
12. Check "Language bar Docked in taskbar" is enabled
13. Check "Show additional Language bar icons in the taskbar" is enabled
14. Check "Show text labels on the Language bar" is enabled
15. You should see a keyboard icon in the task bar and clicking on this allows you to switch between the normal keyboard and the phonetic keyboard.
16. If the default language is not English (United Kingdom) you will need to select that language first by clicking on the language name in the task bar.
17. The phonetic keyboard layout file can be found at <http://www.phon.ucl.ac.uk/resource/phonetics/UnicodePhoneticKeyboard101.pdf>
